

Avinash Humney

Software Engineer

ABOUT ME

I am Avinash, a highly skilled and motivated Frontend Engineer with 2 years of professional experience. I thrive on challenging positions that allow me to contribute my expertise in building exceptional user interfaces and delivering innovative web solutions. Despite coming from a non-CS background, I successfully transitioned into software engineering and currently work at TenderCuts, an online meat delivery platform with over 1M+ Play Store downloads and 4 Star+ user ratings. I am eager to utilize my self-taught skills and experience to make a positive impact.

EXPERIENCE

Apr 2022 - Present

TenderCuts | Remote India

SOFTWARE ENGINEER

- Transformed the entire user interface (UI) for both customer and delivery partner applications, resulting in a remarkable enhancement of user experience and the modernization of the interface.
- Implemented features that streamline store management on the application, including easy online/offline toggling and automated scheduling based on time intervals.
- Pioneered the implementation of our inventory management system specifically tailored for retailers, leading to improved order accuracy and a substantial reduction in support tickets and order cancellations.
- Conducted meticulous code reviews for fellow developers, offering invaluable feedback to ensure superior code quality and adherence to best practices.
- Seamlessly integrated essential APIs into the frontend, thereby streamlining data communication and significantly improving overall application functionality.
- Exhibited expertise in crafting comprehensive test cases, ensuring utmost robustness and reliability of the applications.
- Developed modular and reusable code components, promoting code efficiency and maintainability.

Oct 2020 - Mar 2022

Think201 | Bangalore, India

SOFTWARE ENGINEER

- Spearheaded the frontend development of Arthan Careers, a groundbreaking job portal with a substantial user base exceeding 100k individuals, starting from scratch.
- Led end-to-end UI development and API integration for UnOther, a mobile application designed for summarizing books, collaborating with a diverse range of authors.
- Implemented captivating user interfaces using Angular and MaterialUI, meticulously translating Figma designs into seamless UI implementations.
- Implemented responsive web designs to ensure seamless user experiences across different devices and screen sizes.
- Collaborated with UX/UI designers to translate wireframes and mockups into interactive web interfaces.
